

ABSTRACT

This invention is for an innovative multi-handed poker game where cards are arranged as a polygon, where each side has the same number of cards and each side has corner cards that are shared with adjacent hands. The player can exchange cards from one hand with cards in another hand to improve his odds of winning.

1. A multi-handed poker game where cards are arranged as a polygon, where each side has the same number of cards and each side has corner cards that are shared with adjacent hands. The player can exchange cards from one hand with cards in another hand to improve his odds of winning.
